IN THE CLAIMS

Please amend the claims as follows:

--9. (Amended) A CDMA mobile communication station according to [any one claims 2 to 4 and 6 to 8] claim 2, wherein as the first data channel and/or the second data channel, one or plural channels can be set.

12. (Amended) A CDMA mobile communication system according to claim 10 [or 11], wherein

the first wireless station is a base station,

the second wireless station is a plurality of mobile stations,

the specific packet data is packet data to its own station, and

the packet data other than the specific packet data is packet data to another mobile station.

13. (Amended) A CDMA mobile communication system according to claim 10 [or 11], wherein

the first wireless station is a plurality of mobile stations,

the second wireless station is a base station,

the specific packet data is packet data transmitted from the mobile station connected to a specific call, and

the packet data other than the specific packet data is packet data transmitted from the mobile station connected to a call other than the specific call.--

Claims 16-22 are added.

JC08 Rec'd PCT/PTO 25 APR 2001

DESCRIPTION

CDMA MOBILE COMMUNICATION STATION, CDMA MOBILE COMMUNICATION
SYSTEM, AND CDMA PACKET TRANSMISSION METHOD

TECHNICAL FIELD

The present invention relates to a CDMA (Code Division Multiple Access) mobile communication system to which multicode transmission, closed loop transmission power control, and DTX (Discontinuous Transmission) control are applied, and a CDMA mobile communication station applied to the CDMA mobile communication system, and a CDMA packet transmission method.

BACKGROUND ART

In the CDMA, different spread codes are respectively assigned to each call to spread packet data, so that a plurality of calls are multiplexed on the same frequency. As a method for realizing higher speed transmission by using this feature, there is a multicode transmission system in which a plurality of data channels respectively using a plurality of spread codes are assigned to one call. This multicode transmission method is disclosed in, for example, air-interface specifications "Specification of Air-Interface for the 3G Mobile System Ver.10." formulated by Association of Radio Industries and
